

MSDWT Teacher Evaluation Information for Teachers Using NWEA Primary/Secondary Measure

Determining Students that Met or Exceeded the Target

When determining the number of students that met projected growth. Teachers should include all students whose projected growth falls within the standard error of observed growth.

At the bottom of the teacher's NWEA Achievement Status and Growth Summary Report, there is a legend that shows a symbol, that when displayed next to a "Yes" or "No" on the report next to a student's name, indicates that the growth falls within standard error.

*** ** | 1/4 21 |

† SE on Observed Growth is greater than normal. Use metric with caution.
* SE or SEM greater than normal. Use metric with caution.
‡ Indicates that projected growth falls within standard error of observed growth.

Using the NWEA Growth Target Calculation Form (Spreadsheet)

When determining the number of Students Meeting Growth Target for the spreadsheet, follow this rule:

No[†] = Yes

Yes = Yes

Yes[‡] = Yes

No = No

Enter the number of meeting the rule for "Yes" above on the NWEA Achievement Growth and Summary Report in the cell labeled "Original # of Students Assessed"

Enter the number of students that met projected growth within standard error.

Follow the rest of the steps on the Spreadsheet.

Remember that any student being listed for removal from the teacher's data must be approved by the evaluator prior to submitting the spreadsheet to Standard for Success.

Please consult with your evaluator if you have questions.
